

IN THE SPECIFICATION

Please amend the paragraph beginning at page 3, line 9, as follows:

b1 A database-centric web page solution offers a large degree of functional flexibility and power to handle dynamic publication of large amounts of data on the web. In addition, a database-centric web page solution has the advantage of maintaining a given web page design, or profile. This is due to the fact that the profile is given a ~~priori~~ priority by the template of HTML or XML tags, combined with script function calls to retrieve data from the database. The main disadvantage is that a database system utilizing this solution is more resource-demanding than a database system in which the data is organized as simple static web documents such as, for example, text, sound, video, image and graphics files.
